# BILLING

Don't Mess with the Money

The Finys Suite's Billing module does one thing, and it does it really well: It accurately automates everything having to do with billing. That's why it integrates with policy systems to directly process new business, renewals, and amendments, including applicable premiums, fees, and taxes. That's why it interfaces with payment gateways, credit card processors, EFT, and banks. And that's why its online accessibility makes it easy to use for agents, policyholders, and call centers.

Our Billing module manages notices relating to non-pay cancellations, underpayments, and other billing related activities, as well as providing:

- Support for a variety of billing types, including scheduled and equity
- Management of direct, account, agent, and mortgagee billing
- Suspension of billing at system or account levels
- A single view of all customer billing information
- Account current and agency sweep functions
- Commission processing based on billing
- Paperless delivery of correspondence
- Multi-company support.

It Bends

We designed our Billing module to be flexible. Its flexible configurability enables quick implementation and easily variable payment plans. Its out-of-the-box billing plans enable it to be deployed rapidly. Its override provision lets you amend payments as needed.

It'll bend in just about whatever way you need it to. But it definitely won't break.

This Fits the Bill

There's no such thing as a free lunch. And without a proper system to keep your billing processes running smoothly, your competitors will eat yours. The Finys Suite's Billing module fits the bill.

Please contact us today to let us know how we can help you optimize your billing.
