

# CLAIMS ADMINISTRATION

## No Bold Claims Here

The Finys Suite's Claims module streamlines and automates claims processing. It enforces policy rules, limits, deductibles, and business standards. It processes claims quickly, accurately and consistently. And its self-service capabilities give policyholders, agents, and third-party providers access to real-time status.

There's nothing bold about those claims. They're all true.

## From First Notice to Final Payment

Because our Claims module is so comprehensive, it includes:

- User-friendly FNOL for call centers, carriers, agents, and policyholders
- Role-based usage authorizations
- Automated exception escalation
- Configurable, automated workflows with adjuster activity assignment and management
- Diary, task management, and tracking capabilities
- Integrated correspondence, claim letters and forms
- Named storms, CAT tracking and handling
- Salvage, subrogation, and recoverable tracking
- Multiple payment options, including single payments across multiple reserves
- Vendor management and 1099 capabilities
- OFAC compliance
- Scheduled payment processing.

It enforces all of your policy rules and regulatory governance. And because it's so detailed, it allows payments against any claim to be itemized and to issue just one check to the policyholder.

## Back Up Your Claims

Your policies are promises to your policyholders to indemnify their losses. You can back up those promises quickly, easily, and automatically with the Finys Suite's Claims module.

Please contact us today to let us know how we can help you back up your claims.
