

POLICY ADMINISTRATION

Full Lifecycle Management

With full lifecycle management, the Finys Suite's Policy module contains all the requisite provisions for processes and transactions from underwriting and rating (including what-if scenarios) to quoting and issuance; from automated renewals, cancellations, reinstatements, and notices to on-demand print production.

The module also includes:

- ◆ One-click management of common processes
- ◆ Automated escalation for exception processing
- ◆ Quick rollout of all P&C lines of business and products
- ◆ Support for simple, multivariate, custom, and service bureaus
- ◆ Pre-built integrations with third-party data and report sources (credit, MVR, etc.)
- ◆ Enhanced self-service and collaboration capabilities for all constituents.

All That, Plus Flexibility

The Policy module's user interface features fully configurable workflows, business rules, and data-entry validation criteria. User-determined business rules automate renewals, cancellations, reinstatements, notices, and more. The module processes commissions and enables producer management. It provides extensive self-service capabilities to policyholders and agents. It acts as a single system of record for all distribution channels. And you can get it any way you want it: On site. From the cloud. Your choice.

Don't Waste Time or Money

If your policy administration system doesn't do all the things the Finys Suite can do, you're settling. Don't settle. You don't have to.

Please contact us today to let us know how we can help you get all the Policy Power you deserve.
