THE FINYS SUITE

Digitally Ready When You Are

Simply put, the Finys Suite is a platform of integrated modules for processing personal and commercial property/casualty insurance. To be more specific, the Suite comprises modules for:

- Policy Administration
- Claims Administration
- Billing
- Business Intelligence
- Portals & Mobile
- The Design Studio

It employs user-determined business rules to automate workflows. It supports insurers, MGAs, MGUs and their distribution channels. It supports policyholders and third-party constituents. As you might guess from the list of modules above, it manages the entire insurance lifecycle. And it contains audit controls.

The Suite comes with full integration capabilities — pre-made and ready to accommodate the systems and data sources you use now to ensure full automation, to enhance your business processes, and to help you boost profits with operational efficiency. It also contains advanced integration capabilities that enable you to be ready for future insurtech developments.

Lines of Business

The Suite processes more than 450 combinations of states and lines of business. In fact, it supports all lines, all states, and all bureaus, as well as excess and surplus lines and custom lines from simple to multivariate.

Please contact us today to find out if we can help with your line of business. The chances are good.
